Hi Unregistered

Light Pollution - it's a massive problem for all of us.

The solution would save money AND help us - sign this petition and maybe just maybe something good will come from it. If we don't get behind this sort of thing, we can guarantee one thing - nothing will ever happen!

Sign the petition Unregistered - you know you want to :)

e-petition - stargazing

Thank you

The Chained Princess - 17th January 2008, 06:55 PM

With not much imaging or observing going on thought I'd stick this up. Andromeda and Triangulum with M31 and M33

Canon 350d (unmodded at the time), standard 18-55 zoom 6 x 10 minutes under very dark skies. Processing in Iris and photoshop.

Phil.

Re: The Chained Princess - 17th January 2008, 07:36 PM

Well, I'm glad you did post, it's a lovely widefield image

Regards,

Steve

Re: The Chained Princess

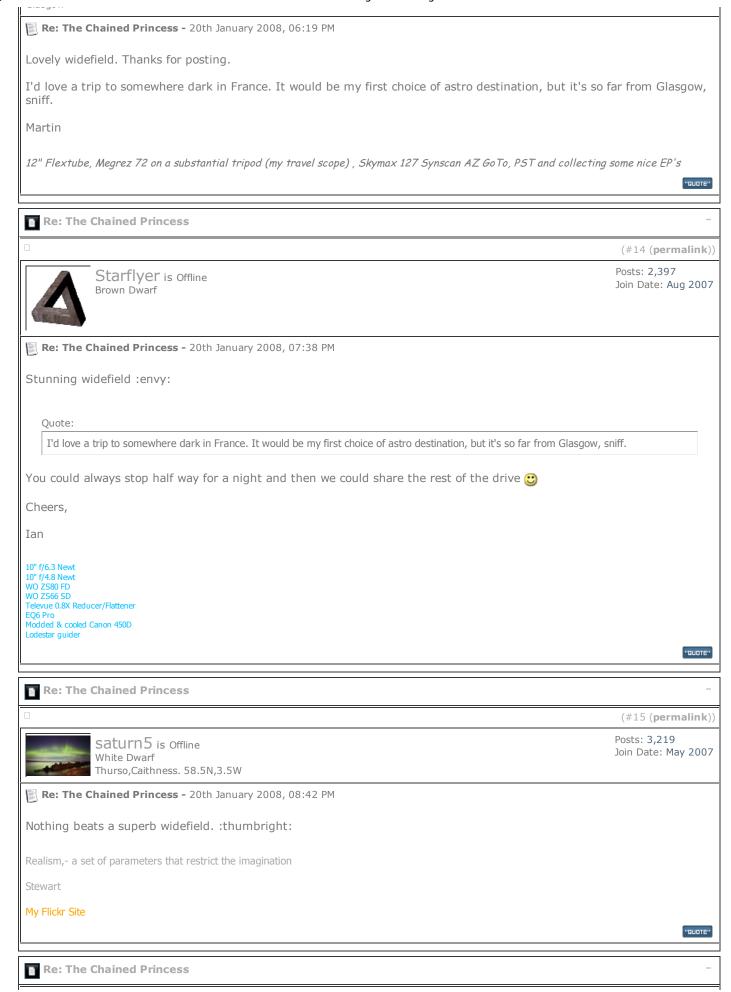

good. Phil.

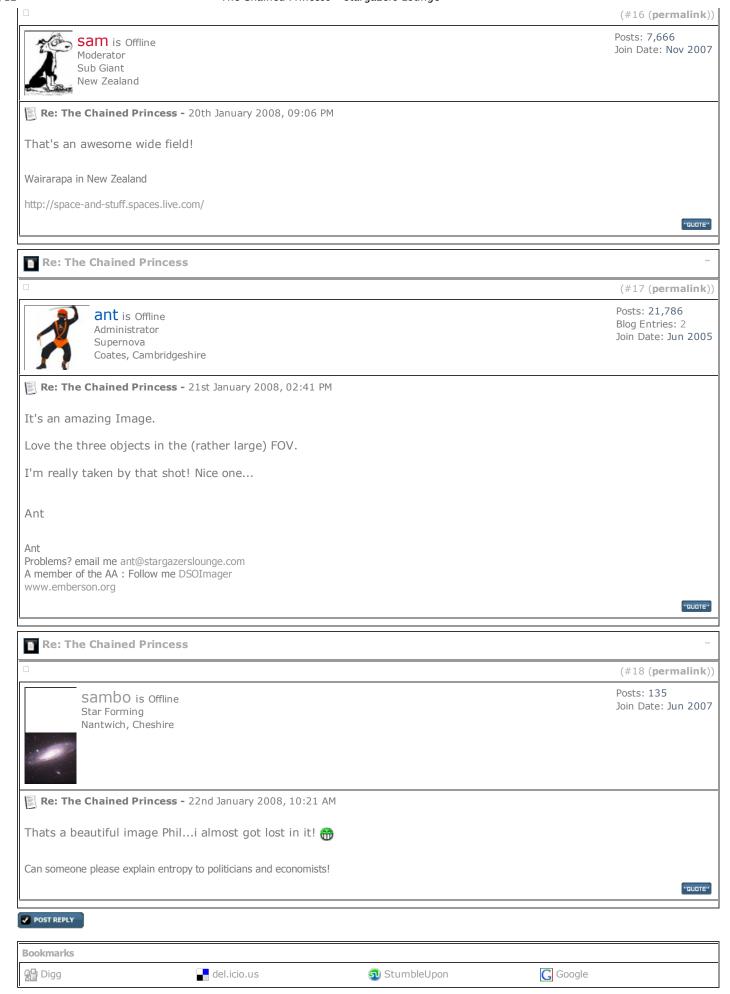

The camera was piggy backed on an LX200, no guiding. North is straight up in the image. I took some nice sharp widefields of the milky way through cygnus, they're great for spotting the Barnard's, but as the camera was unmodded the nebulae are a bit dull.

If anyone ever fancies an SGL trip over there please let me know... Some sketches done with his Televue Genesis and 20" doh are in the sketching forum

That is a cracker of a wide field shot Phil. There is so much in there, and the real bonus of these sort of images, are their educational value. Great stuff. Ron.
